Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

This first extensive study of the practice of blood transfusion in Africa traces the history of one of the most important therapies in modern medicine from the period of colonial rule to independence and the AIDS epidemic. The introduction of transfusion held great promise for improving health, but like most new medical practices, transfusion needed to be adapted to the needs of sub-Saharan Africa, for which there was no analogous treatment in traditional African medicine. This otherwise beneficent medical procedure also created a "royal road" for microorganisms, and thus played a central part in the emergence of human immune viruses in epidemic form. As with more developed health care systems, blood transfusion practices in sub-Saharan Africa were incapable of detecting the emergence of HIV. As a result, given the wide use of transfusion, it became an important pathway for the initial spread of AIDS. Yet African health officials were not without means to understand and respond to the new danger, thanks to forty years of experience and a framework of appreciating long-standing health risks. The response to this risk, detailed in this book, yields important insight into the history of epidemics and HIV/AIDS. Drawing on research from colonial-era governments, European Red Cross societies, independent African governments, and directly from health officers themselves, this book is the only historical study of the practice of blood transfusion in Africa.
