Algorithms and flowcharts are two different ways of presenting the process of solving a problem. Algorithms consist of steps for solving a particular problem, while in flowcharts, those steps are usually displayed in shapes and process boxes with arrows. So flowcharts can be used for presenting algorithms. This page will introduce some examples of algorithm flowcharts .

Examples for Algorithm Flowcharts - Edrawsoft

Algorithms are nothing but sequence of steps for solving problems. So a flow chart can be used for representing an algorithm. A flowchart, will describe the operations (and in what sequence) are required to solve a given problem. You can see a flow chart as a blueprint of a design you have made for solving a problem.
