Basic Personal Counselling is a successful text that addresses communications units in Counselling and Community Services in the vocational market. The text is an easy to read introduction for both professional and volunteer counsellors, and workers in the helping professions. The text introduces skills in a logical sequence, and the ninth edition will retain the core characteristics of the learning process - moving from foundation to more advanced skills, as well as providing practical workplace examples of skills in action, and demonstrating how taking an integrative approach can produce change.

This revised first edition is a comprehensive, easy-to-read introduction to personal counseling written for professional and volunteer counselors and those who train them. A major new addition to the book, making it particularly attractive to those who train counselors, is the inclusion of training group exercises for all skills chapters. After reading a particular chapter, the exercises relating to that chapter, in part VI of the book, can be used by trainers to greatly enhance the learning process. These exercises have been found to be popular with both students and those teaching them. The chapters describing basic and more advanced counseling skills are arranged in a sequence that is particularly suitable when teaching student counselors to learn and practice using these skills for the first time. The authors adopt an integrative approach that allows the reader to learn, understand, and use skills taken from major counseling approaches, and to integrate these into a sequential process that maximizes the possibility of facilitating change in clients. Of considerable value for new counselors are those sections of the book that describe the fundamental principles of the counseling relationship, and explain the theories of change applicable to the various approaches to counseling. Unique features include: a highly practical integrative approach; discussion of the specific skills required for success; practical suggestions on ways to learn and develop new skills; an understanding of the role of a counselor's supervisor; information on practical issues such as keeping records, arrangement of the counseling room, and ways to look after yourself as a counselor; plus practical information on issues of confidentiality and professional ethics. The text will serve as a valuable resource for workers in a wide variety of helping professions where counseling skills are useful, such as psychology, social work, welfare work, medicine, nursing, human services, and education.

Wayne Perry has been a therapist for more than thirty years, but he still hears the same thing from beginning counselors and therapists: Yes, I know what the theory says, but what do I do with this particular client? Drawing on his decades of experience training marriage and family therapists, professional counselors, and pastoral counselors, he answers that question in the updated edition of his landmark book: Basic Counseling Techniques. He provides practical suggestions for setting up the therapy room, using audiovisual recording equipment, and conducting those first critical interviews. You'll learn how to: apply nine different sets of clinical tools; select the appropriate tool for the appropriate clinical situation; and improve how you carry out the clinical thinking process. Each chapter concludes with a "Living into the Lesson" section that allows you to participate in experiential exercises to master what you've learned. While designed for counselors and therapists in the beginning of their careers, even veterans in the field will find value in this updated edition.

The Future of Training in Psychotherapy and Counselling presents a revealing and stimulating account of the current state of training that demonstrates how training will have to adapt if it is to successfully meet the needs and challenges of the future. In an attempt to look afresh at the whole question of training, John Rowan proposes that there are three ways of doing therapy and any examination of training has to consider each of these: * the instrumental, where the main emphasis is on the treating the client or patient * the authentic way, where the main emphasis is on meeting the client or patient * the transpersonal way, where main emphasis is on linking with the client in a more personal way. Each approach

makes different assumptions about the self, about the relationship, and about the level of consciousness involved in doing therapy. By challenging the basic precepts of traditional training, John Rowan encourages the reader to reconsider subjects including the difference between counselling and psychotherapy, culture and ethics, the origins of disturbance in clients, and child development. *The Future of Training in Psychotherapy and Counselling* provides a much needed new perspective that will compel all psychotherapists and counsellors to take a closer look at training in the field.
