

Read Book Dc Machine Objective Questions Answers

Dc Machine Objective Questions Answers

Thank you certainly much for downloading **dc machine objective questions answers**. Most likely you have knowledge that, people have see numerous time for their favorite books once this dc machine objective questions answers, but stop up in harmful downloads.

Rather than enjoying a good ebook in the manner of a cup of coffee in the afternoon, then again they juggled afterward some harmful virus inside their computer. **dc machine objective questions answers** is simple in our digital library an online access to it is set as public suitably you can download it instantly. Our digital library saves in fused countries, allowing you to get the most less latency times to download any of our books later this one. Merely said, the dc machine objective questions answers is universally compatible in imitation of any devices to read.

Questions Answers

Answer 4. Less than 50% . Explanation: Why efficiency of D.C motor is below 50%. The DC motor develops maximum power when the Back EMF is half the applied voltage is $E_b = V / 2$. Practically it is not possible to develop an exact 50% of maximum power because in that case, the current would be much beyond the rated current of the motor.

100 Important MCQ Question of DC Motor / Objective type ...

in a DC machine . A. The current and EMF in armature conductors are alternating while those at the terminals are unidirectional . B. The current and EMF in armature conductors are unidirectional while those at the terminals are alternating . C. The current and EMF in armature conductors and at the terminals are unidirectional times . D.

Motor Basics -1". 1. What will happen if DC shunt motor is connected across AC supply? a) Will run at normal speed b) Will not run c) Will Run at lower speed d) Burn due to heat produced in the field winding View Answer

DC Motor Basics Questions and Answers - Sanfoundry

DC Machines Objective test Questions. 1. In DC Generator the critical resistance refers to: a) Armature. b) Field. c) Load. d) Commutator. B. Remember: If resistance of field is beyond critical resistance Generator will not start.

DC Machines Objective test Questions | Electrical ...

Answer 1. To restrict armature current as there is no back E.M.F at starting .
Explanation: At the time of starting a DC Motor, the Back EMF developed is zero as its speed is zero. We know that general emf equation $E = E_b + I_a R_a$. At starting $E_b = 0$ so $I_a = E/R_a$

100 Important MCQ Question of DC Motor | Objective type ...

Explanation: No explanation is available for this question! 6) A 6 pole wave wound d.c. generator has 460 armature conductors carrying armature current of 180 A. The armature reaction demagnetizing and cross magnetizing ampere turns per pole if brushes are shifted by 6 degree electrical from G.N.A

are. a. 3220, 230.

DC Machines - Electrical Engineering (MCQ) questions and ...

The Chapters of Multiple Choice Questions (MCQs) on DC Machines. This list is mainly about Multiple Choice Questions (MCQs) on DC Machines. So, we have covered all the possible sections of dc machines. For example, we have covered, the working principle of dc motors and working principle of dc generators.

Multiple Choice Questions (MCQs) on DC Machines - About ...

DC Motor DC Generator Multiple Choice Questions with Solutions: [1] Which of the following statements is false? (a) A DC motor converts electrical energy to mechanical energy. (b) The efficiency of a DC motor is the ratio input power to output power. (c) A DC generator converts mechanical power to electrical power.

ELECTRICAL OBJECTIVE QUESTIONS WITH ANSWERS: DC Machine ...

D.C. GENERATORS Multiple Choice Questions :-1. Lamination's of core are generally made of (a) case iron (b) carbon (c) silicon steel (d) stainless steel Ans: c. 2. Which of the following could be lamina-proximately the thickness of lamination's of a D.C. machine ? (a) 0.005 mm (b) 0.05 mm (c) 0.5 m (d) 5 m Ans: c. 3.

Read Book Dc Machine Objective Questions Answers

The commutation of the DC machine must be as ideal as possible for having smoother output voltage. For good commutation, the flux density in the air gap must decrease gradually from maximum value under the center of the pole to zero. 21) The series field winding has low resistance while the shunt field winding has high resistance.
