Weathering and erosion are continuous processes that gradually change the natural environment over time. Weathering is the process of wearing down materials into sediment. Erosion occurs when this sediment is moved.

Weathering and Erosion: StudyJams! Science | Scholastic.com

Weathering and erosion constantly change the rocky landscape of Earth. Weathering wears away exposed surfaces over time. The length of exposure often contributes to how vulnerable a rock is to weathering. Rocks, such as lavas, that are quickly buried beneath other rocks are less vulnerable to weathering and erosion than rocks that are exposed to agents such as wind and water.
